This projector achieves a projection on a 2.0m (80") screen at a short distance of only 94.6cm (37.2")*. Since they can project a large image from directly in front of a screen, teachers can conduct enjoyable lessons effectively using limited classroom space. Students can concentrate on lessons without being distracted by the projector's light source, or the teacher's shadow cast on the screen.

Environment

- ▶ **Compliance with EU Directive RoHS^{*1}**
Reduction of resin usage in production
Use of hot runners in molds for making upper housing in order to reduce mill ends.
 - ▶ **Reduction of CO₂ emissions**
Carton volume has been cut down to 96.2%^{*2}, reducing CO₂ emissions during transport.
 - ▶ **Power saving mode engaged during standby**
 - ▶ **Eco mode**
Eco mode provides power saving.
- ^{*1} RoHS is the acronym of "Directive 2011/65/EU of the European Parliament and of the Council of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment".
- ^{*2} Compared to Hitachi CP-D31N network capable projector on the basis of one carton box.

Design and specifications are subject to change without notice.

- The projected images and comparison photos in this catalog are simulations.
- LCD panels, polarizers and other optical components and cooling fans may need replacement after prolonged usage. For more details, please consult a Hitachi sales representative.
- Do not use in places where there is a lot of water, dampness, steam, dust, soot or tobacco smoke. This may result in fire or malfunction.
- Optical components (lamp, LCD panel, polarizing plate, PBS [polarizer beam splitter]) have limited service lives. They must be repaired or replaced if they are used for a long period of time.
- These projectors use a mercury lamp with high internal pressure. Because of its properties, this lamp may burst with a loud noise or burn out if struck or after it has been used for a period of time. The time until it bursts or burns out varies greatly according to differences between lamps and usage conditions. Turning the lamp's power on and off frequently shortens its service life.
- Optical components other than the lamp: If the projector is used for six hours or more per day, they may need to be replaced in less than a year.
- LCD panel: If the projector is used continuously for six hours or more, its replacement cycle may be shortened.
- Do not turn projector on again for ten minutes after shutdown. Neglect can shorten the lifetime of the lamp. During use and immediately after use, do not touch anywhere near the lamp and the vents as these parts are extremely hot.
